How to calculate your rate

1. Find your destination country and look for the zone in the "Table of FedEx destinations"
2. Choose the service and zone you wish to use
3. Determine rate* by weight
4. If your shipment weights more than 50 lb, use the "Rates per lb" table
5. In the "Rates per lb" table, the rate will be either the computed rate or the initial rate of the next weight break, whichever is less

Get rate quotes and transit time online; FedEx account holders can log in for an account-specific courtesy rate.

* The rates in this document are effective January 2, 2012 and supersede the rates shown in the 2011 rate sheets. Based on the package weight, any fraction of a pound/kilo takes the next higher rate. Rates do not include any other fees or charges that may be assessed such as (but not limited to) declared-value charges, special handling fees, customs duties and taxes, ancillary fees and surcharges.

Calculating Dimensional Weight

Dimensional weight applies when a package is relatively light, compared with the amount of space it occupies. If the dimensional weight exceeds the actual weight, charges may be assessed.

HOW TO CALCULATE DIMENSIONAL WEIGHT

1. Measure the length*, height, width of the package and multiply them.
2. Divide the total by the specific dimensional weight factor.
3. If the dimensional weight exceeds the actual weight, use the dimensional weight of your package to calculate your rate.

$$\text{Dimensional weight} = \frac{\text{Length} \times \text{Width} \times \text{Height}}{139} = \text{Pounds}$$

* Length is the longest side of the package or objects. Girth is (2 x width) + (2 x height).
