How to calculate the DIM Weight

1. Measure the length*/ width and height of the consignment in centimeters.
2. Calculate the volume and divide it by 5,000 to get the dimensional weight in kilograms.
(Note: Round off fractions to the next whole number)
3. If the dimensional weight is greater than the consignment's actual weight, use the dimensional weight to calculate the rate.

$$\text{DIM WEIGHT FACTOR} = \frac{(L \times W \times H)}{5,000} \text{ in cms} = \text{Kilograms}$$

Note:

*Length is defined as the longest side of the consignment.
