

## §73 PostG

Requirements for parcels with increased weight

As of 01.01.2025

From 01.01.2025, a new legal protection requirement (§ 73 PostG) will apply to deliverers of parcels with increased weight.

Like all other transport service providers in Germany, FedEx is obliged to label shipments weighing 10-20 kg and >20 kg accordingly.

This applies to every single parcel that is delivered in Germany, regardless of its place of origin.

## Labels from automation solutions:

If possible, please indicate the real parcel weights when registering your shipment.

This will help you to ensure smooth shipping.

We are working on a solution for labeling on the parcel label. Until this is implemented across the board, the labeling will be carried out by FedEx employees before the parcel is delivered. You do not have to do anything else yourself.

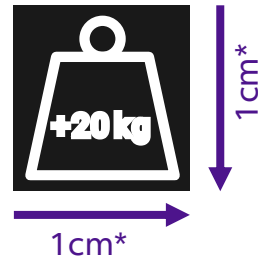

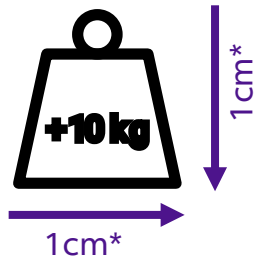

## Label own print/transport management system:

Place the weight icons on your routing label depending on the parcel weight. The size should not exceed 1x1 cm - see orange marking at the intended position (label example).

You can download the label in your preferred format here:

+10kg - [EPS](#), [SVG](#) or [JPG](#)

+20kg - [EPS](#), [SVG](#) or [JPG](#)

\*Maximum icon size 1x1 cm
